

PAYFEVER Creator Kit

Identity Governance & Data Value Routing Platform

Version 0.9.1-beta | May 2026

Welcome to PayFever

PayFever is an identity governance and economic participation platform that enables creators to control how their data is used by AI systems, enforce permission-based access, track attribution across digital interactions, and receive value routing when their data generates economic activity.

This Creator Kit provides an overview of the platform architecture, your rights as a creator, and instructions for accessing the PayFever Creator Platform.

How PayFever Works

PayFever operates through four interconnected layers:

1. Identity Governance

Your digital identity is verified and protected across AI systems. PayFever establishes creator credentials that travel with your data, ensuring you are recognized as the source of value wherever your data is used.

2. Permission Control

You set and enforce data usage permissions for every AI interaction. No AI system can access, train on, or monetize your data without your explicit, revocable consent.

Permissions are granular and can be adjusted at any time through the Creator Dashboard.

3. Attribution Tracking

PayFever monitors when and how your data is accessed, used, and referenced across AI systems. Every interaction is logged, creating a transparent record of your data's journey through the digital economy.

4. Value Routing

When your data generates economic activity — whether through AI training, content generation, or commercial application — PayFever routes value back to you. The value routing system activates when the platform exits beta.

Your Creator Rights

As a PayFever creator, you have the following rights:

- **Right to Identity:** Your digital identity is yours. No AI system may impersonate, replicate, or derive from your identity without permission.
 - **Right to Permission:** You control who accesses your data and under what terms. Permissions are revocable at any time.
 - **Right to Attribution:** When your data is used, you are credited. Attribution is enforced at the system level.
 - **Right to Value:** When your data generates economic activity, you participate in that value. This is not optional — it is infrastructure.
-

Accessing the Platform

Web Platform (Beta)

Access the PayFever Creator Platform at:

<https://payfever.com/platform>

Click “Access Platform (Beta)” to log in and access your Creator Dashboard. The dashboard provides:

- **Governance Score:** Your overall identity governance rating
- **Creator Position:** Your position in the PayFever creator network
- **Data Permission Controls:** Interactive toggles to manage how your data is used
- **Value Attribution:** Track accrued value during the beta period
- **Platform Activity:** Real-time feed of your platform interactions

System Requirements

- Any modern web browser (Chrome, Firefox, Safari, Edge)
 - Internet connection
 - PayFever account (free registration)
-

Platform Architecture

PayFever is built on patent-protected technology with over 200 intellectual property filings covering:

- System architecture for identity governance at scale
- Behavioral attribution across distributed AI systems
- Creator-ascension mechanisms for economic participation
- Permission enforcement protocols for data access control

Beta Program

The PayFever Creator Platform is currently in beta. During this period:

- All features are free to use
 - No credit card is required
 - Value routing will activate when the platform exits beta
 - Your creator position and governance score determine priority access to payouts
 - Early participants establish identity and claim position in the network
